DETAILED ACTION

Response to Amendment

1. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Dohjo (previously cited) in view of Nakamura et al. (Nakamura) (U.S. Patent No. 5,986,723)

a. Dohjo does not disclose that the semiconductor thin film is entirely covered by the signal wiring, the gate wiring, the auxiliary capacitance wiring and the lead electrode. Nakamura on the other hand, discloses a liquid crystal display device (10) where a semiconductor thin film (150) in the semiconductor region, (col. 6, lines 43-67) is formed for a pixel electrode (20) below and is covered by the signal wiring (14), the gate wiring (17), the auxiliary capacitance wiring (18) and the lead electrode (16) via the gate insulating film (23) (see Figs. 1 and 6). In addition, the semiconductor thin film (15) partially covers the gate wiring (17) (Figs. 1 and 6). The electrical connections to various wirings and the electrodes are also disclosed (Col. 6, lines 50 and elsewhere). Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to adapt the specific configuration as disclosed by Nakamura to the liquid crystal display device to provide for a high aperture ratio with high performance display device.

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure: (a) Atherton (U.S. Patent No. 5,483,366), discloses a LCD with high capacitance pixel having an ITO active region/poly silicon pixel region electrical connection.
